

2rd MathorCup Global Mathematical Modeling Challenge

2012

Notice

2rd 2012 Mathorcup Global Mathematical Modeling Challenge is hosted by www.mathor.com website and Asia-Pacific mathematical Modeling website. It's a global undergraduate contest. The first challenge will be held in the mid of the May 2012. The notification for competitions is here as follows.

Contest Description:

2012 Mathorcup Global Mathematical modeling Challenge is a new technology event for the college students. It provide a "free", "open", "fair" challenge ring for the mathematical modeling enthusiasts all around the world. The aim of competition is: training students to identify problems, analyze problems and solve the problem in the logical thinking; improve their ability for mathematical modeling and computer technology, especially for the comprehensive ability to solve practical problems. We encourage the majority of college students actively participate in this extracurricular science and technology competition.

Undergraduate are in the most innovative period of their age, At this period, their ability of learning and habit of thinking are the most important thing for undergraduates. Participating in Challenge can promote students' ability of learning new knowledge, and the ability of logical thinking. That's what is needed in their future working. We hope the students will participate in the challenge actively, showing your enthusiastic, innovative, cooperative style. We will also invite the students from United States, Singapore and etc. to our challenge.

According to the survey for the members of our School Garden mathematical modeling website who participated in the Mathematical Contest in Modeling, some of them are now in Sina, Tencent, Baidu, and other major Internet companies. Through the mathematical modeling contest, students have the ability to use the computer software to solve the problem in the society. Those abilities are what many famous companies attach great importance to. Other members of the excellent contest participates have been admitted to the Tsinghua University, Peking University, Beijing University of Posts and Telecommunications, Chinese Academy of Sciences, and other famous universities to study for the master degree & PHD. Schoolyard Mathematical Modeling Website will invite them to communicate and share their ideas and experience recently.

Most of the teachers of Mathorcup Global Challenge committee in Mathematical modeling had the experience at participating the MCM/ICM contest and winning the prizes. Now they are the scholars and experts in the mathematical modeling area. Most of them have the experience at teaching abroad, and to be the visiting scholars abroad. They attended many high level international conference, research and acquire the hot and frontline subject in the science and technology area.

Challenge Purpose:

free, open, fair

Competition Declaration:

I challenge, I thought, I'm happy

Competition Content:

The competition issue will be the hot topics of emphasis on social, business solutions development, engineering and management science. We don't require participants to grasp in-depth expertise in advance. Participants should be based on questions asked to complete one paper including problem analysis, model assumptions, establishing and solving, calculation methods and computer realization of the design, analysis. Judgment of Challenge awards to the clarity, the reasonableness of assumptions, modeling, creative, results expressed in the accuracy and clarity of the text as the main criteria.

Competition Rules:

1. Competition Title: Two science classes tend topic, a bias comprehensive type of topic.
2. Entry to: undergraduate and graduate students.
3. Modalities of participation: Students participating in team as a unit, or 3 people per team.
4. Respondents Standard: The competition in Chinese and English papers can be submitted electronically. We encourage respondents to submit in English, with English paper for 5 to 20 additional points.
5. Grading: out of 100 points, the index score as a reference, not entirely limited to this.

Item	Mark	Item	Mark
Summary	10	Model result	20
Assume and setting	5	Model conclusion	15
Problem analyses	10	extend	5
Model establish	30	Paper formate	5

Contest Registration:

1. single or 3 person- team. Entry fee is 90 RMB per team.
2. undergraduates, graduate students can participate.
3. Institutions (units) the number of teams is not limited;
4. Application period: now until at 00:00 on May 26th, 2012;
5. Registration: Team Entries: (including inter-institution team) team organized by the students themselves, fill in the registration information by the captain, send to the mailbox mgmmc@mathor.com, while registration fee remitted to the following account. The organizing committee will assign teams number and send to the team mailbox, please note that check their mailbox.
6. Team captain should pay the registration fee.

Contest Time:

May 26 2012 00:00AM we will publish in the Mathorcup global Mathematical Modeling Challenge official website (www.mathor.com), also co-organized by the Asia Pacific published in the digital-analog network (www.apumcm.com). Your team sent to the paper the contest to email (mgmmc@mathor.com) before 8:00AM on June

1st. Foreign teams can be delayed one day. Unified Chinese paper with "Team No. c.doc " or "Team No. c.pdf ", English paper the "Team No. e.doc " or "Team No. e.pdf " name. We will public the winners in two months after .the challenge.

Prizes

Grand Prize (1% of the number of teams) Awards 1000 RMB

Best Programming Prize (1% of the number of teams) Awards 600 RMB

First prize (3% of the number of teams) Awards 300 RMB

Second prize (9% of the number of teams) Awards 100 RMB

Third prize (50% of the number of teams)

Excellent organization Awards 300RMB

Contribution of individual Awards 200RMB

All participants will be awarded electronic certificates.

Other matters please visit the registration website and view the contest organizing committee of the notice.
