

Problem A: Best Flight Queue

The common queue of flying includes the style of beeline, the V-word line etc. Usually, the geese line up columns for north-south migration each year, and will transform a different arrangement of the queue according to the situation. In the film, fighter flights should also use different arrangement of the queue in order to complete the task and go back to the camp. The existing studies have shown the flying queue of geese having the affect to save energy. Do you think the fighter flight queue also help saving fuel?

Please make a model to answer the following questions.

1. Considering the style of beeline and the V-word line, you should make the flying queue model to explain the situations.
2. Ignoring the situation of the collision, you should calculate the best flying style of the gliding, sedition, propeller fighter.
