

Problem B: Business Analysis of the Company

One internet company launches a service, which consisting of five major businesses; these five businesses consist of eight indicators with a key one -- income. Customers can choose their business according to their needs. There is no mandatory binding relationship between the various businesses. The annex to is the first quarter of 2012, including data of various business indicators. If the indicator data is zero, it means no such indicator yet. A positive number describes this business including the new functions. The attachments also include the income data of this service.

Please make a model to answer the following questions.

1. You should make a model to calculate what volume of business is close to saturation and how much is the estimated value of the saturation index.
2. Please judge which indicator is the one of income and please analyses the relationship between the income and some other business.
3. Please analyze the correlation between the various businesses and which business can promote each other and can make the increase in revenue;
4. If you are the project manager of the service, please write a quarterly report to the general manager of the company based on existing data and the model to analyze the current state and future development of the proposal, how to expand the company's profit margins and scale of services.
