

Health standards and health plans

People's health is very important, because the accelerated pace of modern society, life and work pressure, health has become a major problem afflicting humankind. Health standards are many, but how to quantify these criteria, how to evaluate a person's health status is a more difficult problem, the World Health Organization criteria given in the following several

(1) energetic, able to cope with everyday life and leisurely working pressure without feeling too much tension and fatigue.

(2) doing things upbeat, positive attitude, willing to take responsibility, unavoidably not picky, work efficiency.

(3) good rest and sleep well.

(4) adaptability, able to adapt to various changes in the environment.

(5) has a resistance to diseases, can resist the common cold and infectious diseases.

(6) weight properly, the body evenly, standing head and shoulders, arm position coordinate.

(7) eyes bright, responsive, eyelid inflammation.

(8) teeth cleaning, no voids, no cavities, no pain; gums normal color, no bleeding.

(9) shiny hair without dandruff.

(10) muscles, skin elasticity, easy walking and powerful.

Health standards for different age and gender have different requirements. According to the World Health Organization's Age staging is: 44 years ago as a young man was; 45 to 59 years who are classified as middle-aged; 60 to 74 years older than the man-made (asymptotic elderly); 75 to 89 years old artificially aged; 90 years of longevity.

Please complete the following questions:

1, according to the above age given health score for each age stage model;

2, according to your health model for each age group to develop a reasonable plan table includes diet, exercise and other aspects;

3, according to the established model for the health of your team scoring, combined with practical information note your health plan table is appropriate and feasible,
